

Snow Removal

■Snow removal system

The City of Ishikari provides snow removal on roads and sidewalks to ensure safe commuting for citizens during the winter season.

There are several kinds of snow removal:

“New fallen snow disposal”, which means pushing new fallen snow aside, “Smoothing driving surfaces” and “Road-widening”.

In addition, snow piled on roadsides is cleared away via trucks to snow-dumping centers. Roads are also sprayed with anti-freezing solutions (calcium chloride) and traction is increased by spreading sand. The Snow Removal Center is set up in the urban district and provides 24-hour service to protect the lives of citizens.

【Your part in snow removal】

- ① Please clear snow at the entrance of your house individually.
Your driveway must also be maintained, especially after the city’s removal work.
- ② Please don’t throw snow to the street.
When clearing snow from your residence, please don’t throw it into the street. It is dangerous to traffic.
- ③ No street parking.
Please don’t park your car on the street, because it makes snow removal difficult for the city.
